AB The invention is related to the preparation of Anti-Alzheimer drug donepezil I via a new intermediate salt II•X- [X = counter ion], especially the tosylate, in good yield and high purity. Specifically, donepezil was prepared by hydrogenation of an acid addition salt II•X- with H₂ in the presence of Pd/C, and alkylation of piperidine with a benzyl halide. Thus, reacting 5,6-dimethoxyindan-1-one with pyridine-4-carboxaldehyde in the presence of p-toluenesulfonic acid, hydrogenation of II•TsOH with H₂ in the presence of Pd/C at 10 bar for 10 h, alkylation of piperidine-indanone III with benzyl chloride in toluene in the presence of NaHCO₃ at 145° for 8 h, isolation of donepezil by extraction with Et acetate, and acidulation with a methanolic solution of HCl gave I•HCl•H₂O.

AB The invention relates to a solid pharmaceutical composition comprising
 donepezil hydrochloride hydrate and a process for its preparation. In
 particular it relates to a composition and a process wherein the donepezil
 hydrochloride retains its polymorphic form and is therefore highly stable
 against conversion into other polymorphic forms.
